

REGULAR PAPERS

Control Theory and Applications

Aperiodic Disturbance Rejection in a Modified Repetitive-control System

L. Zhou and J. She 883

Concise Adaptive Fuzzy Control of Nonlinearly Parameterized and Periodically Time-varying Systems via Small Gain Theory

G. Zhang and X. Zhang 893

FIR-type State-feedback Control Law for Discrete-time LTI Systems with Polytopic Uncertainties

D. H. Lee, J. B. Park, Y. H. Joo, and S. K. Kim 906

Vessel Motion Control using Rope Tension Control Strategy

A.-M. D. Tran, S.-H. Jung, J.-I. Yoon, and Y.-B. Kim 915

A Modular Designed Bolt Tightening Shaft Based on Adaptive Fuzzy Backstepping Control

S. Liu, S. S. Ge, and Z. Tang 924

Delay-dependent H ∞ Control for a Class of Uncertain Time-delay Singular Markovian Jump Systems via Hybrid Impulsive Control

H. Lv, Q. Zhang, and J. Ren 939

Free-Matrix-based Integral Inequality for Stability Analysis of Uncertain TS Fuzzy Systems with Time-varying Delay

W.-P. Luo, J. Yang, and X. Zhao 948

Adaptive Control of Hammerstein Systems with Unknown Input Nonlinearity and Partially Modeled Linear Dynamics

M. A. Janaideh and D. S. Bernstein 957

Linear Extended State Observer Based Sliding Mode Disturbance Decoupling Control for Nonlinear Multivariable Systems with Uncertainty

H.-L. Xing, D.-H. Li, J. Li, and C.-H. Zhang 967

Finite Frequency Fault Detection for TS Fuzzy Singular Multiple Timedelay Systems

D. Zhai, L.-W. An, J.-H. Li, and Q.-L. Zhang 977

A Novel Control Algorithm for the Self-organized Fission Behavior of Flocking System with Time Delay

P. Yang, M. Liu, X. Lei, and C. Song 986

State Estimation and Parameter Identification Method for Dual-rate System based on Improved Kalman Prediction

P. Huang, Z. Lu, and Z. Liu 998

The Consensus of Multi-Agent Systems with Uncertainties and Randomly Occurring Nonlinearities via Impulsive Control

D. Li, J. Ma, H. Zhu, and M. Sun 1005

Complete Delay-decomposing Approach to Exponential Stability for Uncertain Cellular Neural Networks with Discrete and Distributed Time-varying Delays

Y. Du, W. Wen, S. Zhong, and N. Zhou 1012

Robot and Applications

Smooth Trajectory Planning for a Parallel Manipulator with Joint Friction and Jerk Constraints

L. Liu, C. Chen, X. Zhao, and Y. Li 1021

Position Coordinate Representation of Flying Arrow and Analysis of Its Performance Indicator

Y. Jeong, S. A. Wibowo, M. Song, and S. Kim 1036

Modeling and Simulation of Quadrotor UAV with Tilting Rotors

M. Elfeky, M. Elshafei, A.-W. A. Saif, and M. F. Al-Malki 1046

Alternative Identification of Wheeled Mobile Robots with Skidding and Slipping

H. Kang, C.-W. Park, and C.-H. Hyun 1055

Minimizing Human-exoskeleton Interaction Force by Using Global Fast Sliding Mode Control

D. M. Ka, C. Hong, T. H. Toan, and J. Qiu 1063

Bilateral Control Based Rupture Protection Method in Surgical Robot Using Improved Master Device

J. S. Kang, M. C. Lee, and S. M. Yoon 1073

Attitude Control for Astronaut Assisted Robot in the Space Station

J. Liu, Q. Gao, Z. Liu, and Y. Li 1081

Control of a Robotic Manipulator in the Polar Coordinate System using a Biarticular Actuation Mechanism

H. Choi, S. Oh, and K. Kong 1095

Hybrid Position/Force Control using an Admittance Control Scheme in Cartesian Space for a 3-DOF Planar Cable-driven Parallel Robot

J. Jun, X. Jin, A. Pott, S. Park, J.-O. Park, and S. Y. Ko 1106

Intelligent Control and Applications

Chaotic Synchronization of Regular and Irregular Complex Networks with Fractional Order Oscillators

S. Angulo-Guzman, C. Posadas-Castillo, M. A. Platas-Garza, D. A. Diaz-Romero, and D. Lopez-Mancillaim 1114

Coexisting Attractors Generated from a New 4D Smooth Chaotic System

Q. Lai and S. Chen 1124

TECHNICAL NOTES AND CORRESPONDENCE

Fast Acquisition of GPS L5 PRN and NH Code Using LI Signal for Software Receivers

J.-H. Lee and D.-S. Shim 1132

Consensus of Agents with Mixed Linear Discrete Dynamics

Y.-Z. Song 1139

Finite-time Stability for a Linear Discrete-time Delay Systems by using Discrete Convolution: An LMI Approach

S. B. Stojanovic, D. L. Debeljkovic, and M. A. Mistic 1144

CONTACT OFFICE : Institute of Control, Robotics and Systems, Bucheon Techno Park 401-I301-I, Pyeongcheon-ro 655, Wonmi-gu, Bucheon, Gyeonggi-do 14502, Korea. Tel: +82-32-234-5806, Fax: +82-32-234-5807, E-mail: journal@ijcas.com

Published by Institute of Control, Robotics and Systems and the Korean Institute of Electrical Engineers. Distributed by Springer. Printed by Dream Media. This journal is published bimonthly; on the first day of February, April, June, August, October, and December. This journal was supported by the Korean Federation of Science and Technology Societies (KOFST) Grant funded by the Korean Government. Subscription information is available at <http://www.ijcas.com> where full-text is available. It is printed on acid-free paper.

Information for Authors

International Journal of Control, Automation, and Systems

Aims and Scope

The International Journal of Control, Automation, and Systems (IJCAS) is a bimonthly published periodical. As of 2003, it is a joint publication of Institute of Control, Robotics and Systems (ICROS) and the Korean Institute of Electrical Engineers (KIEE). The purpose of the journal is to establish a high quality archival periodical presenting state of the art, recent advances and practical applications of control, automation and systems engineering. In the journal, the three technical areas included are: Control Theory and Applications, Robot and Applications, Intelligent Control and Applications.

Two types of contributions are regularly considered:

- (1) Regular Papers: Presentation of significant research, development or application of control concepts and normally limited to ten pages in final form.
- (2) Technical Notes and Correspondence: Brief technical notes, comments on published areas or established control topics, corrections to papers, and notes published in the Journal. Manuscripts up to five pages are allowed in final form.

Conditions of Publication

Submission of a manuscript implies that it has not been copyrighted, published, submitted, nor accepted for publication elsewhere. All submitted manuscripts should be as concise as possible. Longer manuscripts may be considered, but have a proportionately lower probability of acceptance.

Peer-Review

All manuscripts are treated as confidential and peer-reviewed by anonymous reviewers selected by Editorial Board. The corresponding author is notified possible of the editor's decision to accept, reject, or request revision of manuscripts. When the final revised manuscript is completely acceptable according to IJCAS format and criteria, it is scheduled for publication in the next available issue.

Submission by Internet

Manuscripts can be submitted electronically via our website. This can be done by visiting the IJCAS website at <http://ijcas.com> and following the instructions. Only PDF file is accepted and authors should embed all the fonts needed to print the paper.

Manuscript Preparation

- (1) Manuscripts must be written in English and the TeX source-file should be prepared in a LaTeX format (by using IJCAS.cls). Other file formats are accepted also as long as the manuscript is typeset in two-column and single-space structure; however the conversion process by the IJCAS may result in 1 to 3 month delay in the printing process.
- (2) Authors of an accepted manuscript will be required to provide the text of the final version of their manuscript on the website <http://ijcas.com>.
- (3) The preferred formats for graphics are TIF, EPS, and JPG formats. High-contrast line figures should be prepared with 600 dpi resolution, and color/gray

figures should be prepared with more than 300 dpi resolution. The color figures should be clearly seen even though they are printed back and white printers.

(4) Brief biographies and either clear glossy photographs of the authors or TIF, EPS, and JPG files of the figures should be added in the last page.

Manuscript Style

(1) First page must contain:

- a) Title of paper, author(s), and affiliation(s);
- b) Abstract (not exceeding 300 words for Regular Papers or 75 words for Technical Notes and Correspondence, and without equations, references, or footnotes);
- c) Keywords (at least four key words or phrases);
- d) Complete mailing address and e-mail address;
- e) Preferred address for correspondence and return of proofs; and,
- f) Footnotes (if desired) containing acknowledgement of financial or other support.

(2) Provide an introduction that includes a statement of the purpose and contribution of the paper.

(3) References should be cited within the text in numerical order according to their order of appearance. The numbered reference citation should be enclosed in brackets, e.g., "KF is proven in [1]. Dorf [2] introduced another method."

(4) References should appear at the end of the paper.

Example:

- [1] G. D. Hong, "Call for papers," IEEE Trans. on Automatic Control, AC-7, no. 1, pp. 100-105, January 1999.
- [2] C. H. Dorf, *Modern Control Systems*, Addison-Wesley, 1999.
- [3] G. D. Hong, "A way to success," Proc. of American Control Conference, San Diego, pp. 106-110, June 1999.

Copyright

It is the policy of the IJCAS to own the copyright to the technical contributions that it publishes on behalf of the interests of the IJCAS, its authors, and their employers, and to facilitate the appropriate reuse of this material to others.

Page Charge and Reprints

Authors should be charged for publication to make a contribution to defray part of the publication cost. A page charge form (USD 300 under 8 pages) is sent to the authors with proofs. Author will receive 20 reprints only if the reprint charge (USD 100) is honored.

Overlength Page Charge

An overlength page charge is imposed on all papers exceeding 8 pages in length, including illustrations. The charge is USD 100 per page for each page over the first eight.
